

Simulation Center (SC)
SW-BL-06-01
Revised
24 Sep 01

U. S. Army Space and Missile Defense Command (USASMDC)
P.O. Box 1500
Huntsville, AL 35807-3801

1.0 BACKGROUND

1.1 The U. S. Army Space and Missile Defense Command (USASMDC) manages the Simulation Center (SC), a High Performance Computing (HPC) resource facility, for the Ballistic Missile Defense Organization (BMDO) to support the development, testing, and integration of the Department of Defense (DOD) space and missile defense capabilities for the warfighter. The technology areas for this research include: reliable fault tolerant computing, software techniques for complex systems, real-time algorithms computation, local and wide area communications, computer networking, computational fluid dynamics, modeling and simulations, phenomenology, threats and countermeasures, and advanced hardware.

1.2 The SC is a self-contained, fully operational high performance supercomputer center that supports DOD BMDO, National Missile Defense (NMD), Theater Missile Defense (TMD), USASMDC and High Performance Computing Modernization Office (HPCMO) projects and other government agency programs. The SC provides users within DOD BMDO, NMD, TMD, USASMDC, and HPCMO, authorized contractors, and other government agencies (OGAs), a centralized resource for classified and unclassified supercomputer processing, parallel processing, data visualization, modeling and simulation, computational fluid dynamics (CFD), networked communications, software development, testbed, technical and administrative support services. The SC is located at the USASMDC building in Huntsville, Alabama's Cummings Research Park East and is connected to the USASMDC Advanced Research Center (ARC) via high-speed communication links. As a networked node of the ARC, the SC participates as a node on the Ballistic Missile Defense Network (BMDN). As a participant of the HPCMO Distributed Center, the SC is connected to the DOD high performance computing network of Major Shared Resource Centers (MSRCs) and DCs via the Defense Research and Engineering Network (DREN). The SC also hosts the Southeastern Communications Hub for the BMDO Virtual Data Center (VDC).

2.0 OBJECTIVES

2.1 This Scope of Work (SOW) defines the technical services, operation, maintenance, security, and management requirements to be accomplished by the SC contractor for the USASMDC SC. The SOW also defines the necessary support required for efficient utilization of the high performance computational resources needed by application users engaged in development, testing and integrating space and missile defense applications for the warfighter.

3.0 REQUIREMENTS

3.1 The computational services being provided at the SC are required to support the design, development, and testing of DOD Weapon Systems Elements that support Space and Missile Defense system programs. Services provided include technical and engineering support, feasibility studies, requirements definition, and risk analyses of computational and network resources.

3.2 In the performance of this SOW, the contractor shall provide personnel who are trained and have a high degree of expertise and experience in the operation, routine maintenance, and support of high performance supercomputers; large scale mainframe computers, minicomputers, large scale storage devices; high performance graphic workstations; special purpose computer systems; data, wide and local area networks and communications; computer networking and interoperability. To meet the high performance computational requirements of the SC users, availability and reliability of the computer system(s) must be maximized through efficient operations and maintenance procedures.

3.3 The contractor shall work closely with a high degree of cooperation with personnel of government agencies and other BMDO, USASMDC, PEO-MD, and HPCMO support contractors.

3.3.1 The contractor shall comply with DD254 for contractor employee personnel security requirements.

3.3.2 The contractor shall establish an organizational structure and staff it with key employees in accordance with (IAW) the Special Instructions to Offerors, Simulation Center (SC).

3.3.3 The contractor shall use an Integrated Product Team (IPT) approach and the Army Performance Improvement Criteria (APIC) Deployment Strategy to support the users and work with contractor personnel and governmental agencies on a continuing basis. The IPT shall be defined as consisting of contractor employees, government technical, and government contracting officer/representative as required.

3.4 Administrative Requirements.

3.4.1 The contractor shall provide all the administrative functions needed to operate, maintain, upgrade or procure, and integrate high performance computer resource systems.

3.4.2 The contractor shall prepare and coordinate with the IPT personnel, prior to implementation, all plans and procedures which may affect the operation of the SC. These plans and procedures shall include upgrade planning, systems and operational studies, and schedule operations. (CDRL *001)

3.4.3 The contractor shall update and maintain a complete set of SC user procedures to include bulletins and memoranda necessary to provide user required information on the use of the SC. Electronic format (Web based) shall be used as directed.

3.4.4 The contractor shall update and maintain a complete set of up-to-date operating procedures describing all day-to-day functions and responsibilities of the

various equipment operations, access control, and tape/disk library. Specifically, the contractor shall:

3.4.4.1 Prepare, update, and maintain a SC configuration/facility layout document to include a comprehensive description of the SC facility, hardware, software, internal and external communications links, electrical and logical connections, and equipment locations. (CDRL *008)

3.4.4.2 Maintain a SC document library. The Contractor shall update and maintain the library including user required documentation and reference material on commercial software products and SC developed user procedures.

3.4.4.3 Update and maintain SC security procedures. (CDRL *006)

3.4.4.4 Maintain and report ADPE Management information IAW DA Instruction Manual, Automation Equipment Inventory, November 1, 1990. (CDRL *008)

3.4.4.5 Maintain an automated system for the accountability, control, and reporting of Government Furnished Property(GFP) IAW the Federal Acquisition Regulation (FAR) Part 45, DOD FAR Supplements (DFARS) Part 245, and Army Far Supplements (AFARS) Part 45. (CDRL *008)

3.4.5 The contractor shall coordinate and manage the moving, storage, and disposition of obsolete/excess equipment IAW Government Furnished Property Clauses 45.106 and the Defense Automation Resources Management Manual DOD 7950.1-M. (CDRL *008)

3.4.6 The contractor shall establish, implement, and update procedures for the protection of vendor and user proprietary software.

3.4.7 The contractor shall acquire and fully account for all software, licenses, software maintenance agreements, hardware maintenance agreements, and facility environmental maintenance agreements as required to meet SC requirements.

3.4.8 The contractor shall perform hardware and software performance analysis to ensure optimized throughput of SC systems to achieve maximum utilization of all system resources. The contractor shall consider historical data and user input in determining potential out year requirements for hardware and software upgrades.

3.5 Technical Services Requirements.

3.5.1 User Support

3.5.1.1 The contractor shall be responsible for all SC computer access authorization after Government clearance, compliance with operating procedures, file utilization, and with security requirements for SC assets.

3.5.1.2 The contractor shall control and distribute documentation of all system software used by SC users and SC staff.

3.5.1.3 The contractor shall assist the SC users with the resolution of any hardware or software related problems. All problems shall be duly recorded and a log of the status of current problems shall be maintained until resolved and subsequently provided to the government in a monthly report. (CDRL *002)

3.5.1.4 The contractor shall conduct SC user orientations as required.

3.5.1.5 The contractor shall maintain a library of storage devices for SC users. Records will be maintained regarding assignment, classification, and other pertinent data. Tape/Media management procedures will be maintained and adhered to regarding cleaning, degaussing, and deletions.

3.5.1.6 The contractor shall ensure that disk resident permanent files are archived at regular intervals in accordance with approved procedures for recovery and backup in the event of a malfunction. A permanent file management system shall be maintained which will purge inactive files on a regular basis and maintain a log of storage space and utilization of all permanent file storage. The contractor shall maintain policies and procedures to assure availability of working storage file space.

3.5.1.7 The contractor shall inform the government SC technical monitor of all user problems, concerns, and solutions regarding SC services.

3.5.1.8 The contractor shall update, maintain, and, upon approval by the government technical monitor, implement a written set of procedures that control the issuance of user identifications and passwords for system access.

3.5.1.9 The contractor shall perform hardware and software performance analysis to support user requirements.

3.5.2 Systems Support

3.5.2.1. The contractor shall provide all necessary operational support to include system problem analysis, development, integration, and checkout of all local enhancements for problem resolutions, communications support and operating system maintenance.

3.5.2.2 The contractor shall coordinate operating system software updates with IPT members, appropriate government, special testbed and SC user personnel. The contractor shall maintain and update local system modification files, and create and install new operating systems prior to configuration updates. The contractor shall maintain a log of all significant malfunctions, problem analysis, resolution procedures, and actions implemented.

3.5.2.3 The contractor shall develop, test, and document any new systems programs required to satisfy the needs of the SC users.

3.5.2.4 The contractor shall install, integrate, checkout, update, maintain, and execute all SC special purpose software. The contractor shall also ensure that any special purpose software product problems are properly identified, documented, and corrected. The contractor shall analyze operating system software problems and install corrective codes as required.

3.6 Resource Analysis Requirements

3.6.1 The contractor shall continually analyze SC hardware and software resources, perform computer resource utilization studies, provide monthly utilization reports, and make recommendations to the government that will maximize utilization, efficiency, and improve reliability. (CDRL *005)

3.6.2 The contractor shall analyze new resource requirements, make recommendations to the Government and as authorized by the Contracting Officer shall acquire, install, maintain, and integrate all new hardware and software resources and special test equipment. The contractor shall acquire the hardware and software and shall turn the property over to the Government to be placed upon the Government's property books. The Government shall then issue the property to the contractor for Government use under the terms of this contract. The contractor shall receive no fee (\$0.00) for hardware and software purchases.

3.7 Operational Requirements

3.7.1 The contractor shall be responsible for the operation of all SC computer systems and supporting equipment to include equipment configuration and composition that change due to equipment upgrade, change-out, obsolescence and new resources. This includes the HPC DC systems. The contractor shall participate in all HPC functions as required by the HPCMO or as directed.

3.7.2 The contractor shall operate the SC in a normal mode of operation* defined as daily, Monday through Friday, from 0700 to 1700 hours. During the normal mode of operation, both classified and unclassified processing capability shall be available to authorized users. On occasion, the contractor shall also be required to extend the normal mode of operation as mutually agreed to by the government technical monitor and the contractor program manager. The contractor shall provide remote access to SC users for unclassified processing on a twenty-four hour a day, 365 days per year schedule.

3.7.3 The contractor shall receive and process all jobs from Government authorized users, monitor and report facilities related problems, maintain and control the consumable supplies, and conduct security and safety duties.

3.7.4 The contractor shall be responsible for monitoring all hardware maintenance and facilities to assure that proper attention is given to all malfunctions and that damage to facilities or hardware is prevented.

3.7.5 See 3.6.2

3.7.6 The contractor shall establish and implement appropriate software accounting and validation methods, to include identification of user, times of use, access validation, and summary reports.

3.8 Maintenance Requirements

3.8.1 Maintenance: The contractor shall provide the repair parts, supplies and maintenance service necessary to maintain SC operations at a high level of availability and operations. This shall include, but not be limited to, maintenance, calibration, testing, evaluation, and training personnel on new equipment and software programs. The offeror shall describe the approach for fulfilling this requirement and include the level of detail necessary for the government to understand how Original Equipment Manufacturer (OEM) maintenance will be performed. The contractor shall identify those techniques and procedures proposed for training in-house personnel in maintenance activities as a cost effective alternative to the use of OEM or vendor services and maintenance.

3.8.2 Scheduled Hardware Maintenance: The contractor shall identify an approach for maintaining in good operating condition, all automatic data processing equipment (ADPE), software and items described in the appendices. The contractor shall develop a hardware maintenance plan/procedure to insure good operating conditions for the equipment to be maintained; items, consistent with the categories described in the appendices, shall be added or deleted, routinely, throughout the performance of the contract. The plan shall include procedures addressing: scheduled preventive maintenance (PM), remedial maintenance (RM), component and system checks, repair of equipment malfunctions, maintaining support readiness status, inventory control warranty protection, and current equipment lists/configurations. Maintenance shall be performed by the OEM or by OEM certified personnel, and repair parts or parts of equal quality shall be equivalent to OEM parts. Principal period of maintenance (PPM) is defined as eight (8) consecutive hours beginning normally at 0700 hours, Monday through Friday, excluding holidays observed by the Government. During such period, maintenance personnel must coordinate with Government personnel and IPT representatives and provide flexible response to the outage conditions by considering workload criticality and for the purpose of restoring equipment to good operating conditions without unnecessary delay. The contractor shall identify concepts and proposed use of maintenance diagnostics. Maintenance diagnostics are defined as software programs used to test the components of the SC collectively and individually for proper functioning and reliability during preventive and remedial maintenance, system audit, or problem definition. (CDRL *008)

3.8.2.1 Maintenance/Repair

3.8.2.1.1 Preventive Maintenance (PM). PM is defined as that maintenance which is designed to keep the equipment in good operating condition and which is performed on a scheduled basis. PM shall normally be provided during the PPM. Preventive maintenance may be scheduled and/or performed concurrently with remedial maintenance.

3.8.2.1.2 Remedial Maintenance (RM). Remedial maintenance is defined as that maintenance performed by the contractor which results from equipment failure and which is performed as required on an unscheduled basis. Remedial maintenance shall be performed promptly once equipment is identified as inoperative. The contractor shall identify a point of contact and make arrangements to enable maintenance representatives to receive all notifications that equipment is inoperative. This notification may be provided by SC users or by Government personnel. During the PPM, the contractor's maintenance personnel shall arrive at the designated point within twenty-four (24) hours from the time that the RM is required. In addition to on-site maintenance service during the stated PPM, on-call maintenance shall be provided outside the PPM. A twenty-four (24) hour response time is required for this on-call RM.

3.8.2.1.3 Hardware, Software, Materials, Spares, and Replacement Parts. The contractor shall identify an approach for the purchase and maintenance of the materials necessary to perform the tasks defined in this SOW, including identification for the disposal of obsolete equipment and parts. New or remanufactured parts shall be used in effecting repairs. The contractor shall maintain an up-to-date service record for the system. The record shall provide, as a minimum, the date and type of equipment, service performed, list of parts used, man-hours utilized, and downtime. The report shall be signed by the responsible maintenance personnel.

3.8.3 The contractor shall maintain the SC ADPE to the level of scheduled availability and reliability (95% or better uptime) required to support the SC needs.

3.8.4 The contractor shall maintain environmental support equipment. This shall include as a minimum, preventive maintenance for water chillers, air conditioners, and fire protection systems to ensure proper operation and protection of the SC equipment and facilities.

3.9 Communications Requirements

3.9.1 The contractor shall design, build, operate, maintain and upgrade high speed (e.g. fiber optic) local networks in the SC for integrating heterogeneous high performance computing systems and maintain state-of-the art local network interconnections that support SC operations. (This does not include other areas outside the SC to include the rest of the SMDC building.)

3.9.2 The contractor shall establish procedures to implement communications and access to the SC. The procedures shall identify use of the IPT process and delineate the necessary steps and activities needed to provide service, to include as a minimum: cost estimates, leasing requirements, COMSEC needs, purchase requirements, and other pertinent data and design criteria to ensure successful interoperability with approved users. These procedures shall be approved by the Government prior to implementation. (This does not include other areas outside the SC to include the rest of the SMDC building.)

3.9.3 The contractor shall use encryption devices and keying materials that are National Security Agency (NSA) approved Type 1 products for classified and appropriate communications networks.

3.10 Security Requirements

3.10.1 The contractor shall comply with Clause 52.204-2 and DD254.

3.10.2 The contractor shall operate the DOD HPCMO DC systems in compliance with DOD HPCMO security guidelines as required and directed by the appropriate HPCMO, US Army and SMDC Security Regulations. The contractor shall provide reports IAW HPCMO DC rules and regulations as required. (CDRL *006)

3.10.3 The contractor shall prepare, update, implement and maintain a System Security Document to describe the practices and procedures of the SC in safeguarding classified information. (CDRL *006)

3.10.4 The contractor shall operate the cryptographic equipment IAW AR 530-2, Communications Security.

3.10.5 The contractor shall provide network security IAW DOD Directive 5200.28, AR 380-19, and AR 380-5.

3.10.6 The contractor shall maintain a full library of backup data, documentation, and master files at an alternate site to assure system and master file reconstruction capability.

3.10.7 The contractor shall protect all non-classified, company and government sensitive data required to be maintained in the SC IAW AR 25-55, DOD Directive 5230.24 and MIL STD 1806. The contractor shall comply with Government-provided Operations Security Guidelines IAW AR 530-1, Operations Security (OPSEC), for the protection of unclassified sensitive information.

3.10.8 The contractor shall provide controlled access to the SC during hours of operation.

3.11 Supply Requirements. The contractor shall provide all office supplies necessary for operation and maintenance of the SC. The contractor shall not charge to nor receive any fee from the government for such purchases.

3.12 Phase-In/Phase-Out Requirements

3.12.1 The contractor shall develop a Phase-in/Phase-out plan that states in detail the procedures, documentation that will be provided, and the methodology for transitioning to a follow-on contractor at the completion of the contract. This plan shall address a thirty (30) day operational transition that allows an orderly and effective transition at the end of the contract performance period. (CDRL *009)

3.13 Accounting and Reporting Requirements

3.13.1 Program Reviews and IPTs. The contractor shall provide schedules and conduct program reviews to assess the accomplishment of technical and programmatic efforts. The contractor shall propose and identify use of an IPT approach to ensure early government involvement in SC activities such as: upgrade plans, operations, maintenance, problem resolution, and identification and acquisition of new equipment. The proposed IPT approach shall consider the use of government and contractor personnel that contributes to a detailed, cost effective proposal for the operation and maintenance of the SC.

3.13.2 The contractor shall provide documentation of accomplishments in the form of periodic technical and management reports. (CDRL *009)

3.13.3 The contractor shall maintain separate utilization records for each specific technical program/effort. (CDRL *008)

3.13.4 The contractor shall maintain a record of all programs that are executed at the SC and statistics of usage. These records shall be identified by program/system, technical monitor, and program element on a monthly basis. (CDRL *008)

3.13.5 The contractor shall maintain a current roster of all users, technical monitors, and IPT members.

3.14 Technology and Equipment Enhancements. The contractor shall conduct analysis to identify technology and equipment enhancements that will improve SC operations and support which includes hardware, software, visualization, associated peripherals, etc. These analyses, along with recommendations, shall be coordinated with IPT members. In addition, details shall be provided to support incrementally funded equipment and ADPE purchases. All purchases shall be approved by the contracting officer. In addition, the contractor shall maintain a record of all requests for support that cannot be met with current resources. Record shall include date of request, requestor,

equipment and APE purchase. All purchases shall be approved by the contracting officer. In addition, the contractor shall maintain a record of all requests for support that cannot be met with current resources. Record shall include date of request, requestor, program, and subsequent resolution of the issue, e.g. acquisition of resources, referral, unable to support.

4.0 Special Technical Contract Line Item Number. With the issuance of a Technical Directive from the SC contracting officer, the contractor shall perform additional requirements not covered under paragraph 3.0, which may include one or more of the following: Analysis, Engineering/Design, Enhancement, Migration, Conversion, Integration, Testing, or acquisition for special tasks and events provided for through customer funding. The contractor shall maintain control and reporting for projects IAW CDRL *00A.

4.1 Simulation Center Move. The contractor shall coordinate and develop a SC Move plan not to exceed \$250,000 for the proposed relocation of the SMDC Huntsville facility to its new location. The plan shall be implemented after government approval upon actual relocation.

**INSTRUCTIONS FOR PREPARATION AND DELIVERY
OF DATA AND FOR INTERPRETING DD FORM 1423**

1. Letter of Transmittal - The Letter of Transmittal (coded LT in block 7 of the CDRL) shall be used when transmitting the reports/data items listed in the CDRL. The data letter transmittal (LT) shall reference the CDRL sequence number(s) of the data items. For data requirements which have an "A" coded in CDRL block 8, the LT shall contain a request for written approval from the government. Copies of data designated for delivery to the responsible technical office shall be forwarded by the original LT. Copies of all letters of transmittals (without enclosures unless they are specifically requested) shall be furnished to the USASMDC contracting officer, ATTN: [REDACTED] and also to the administrative contracting officer (ACO) when another government agency is identified at contract award to perform those tasks. The contractor shall also forward a copy of the LTs (with appropriate enclosures) to each data recipient identified in CDRL, Block 14. The government's/contractor's responsibilities for timely processing of such submitted data is identified in Block 16 by the expression "APPROVAL" GXX/CYY" (numbers are inserted in place of XX and YY which represent numbers of calendar days). This expression is interpreted as follows: "Government response, e.g., approval/disapproval/comments will be provided in "XX" calendar days after receipt of the data from the contractor; the contractor will update/revise the data reflecting the government's comments and resubmit with "YY" calendar days of receipt of the government response. When a "No" appears in Block 8, approval is not required.

2. Relationship Among CDRL Exhibits A, B, etc. This paragraph applies only if the contract contains multiple CDRL exhibits. The exhibits correspond to the contract period identified by CLINs i.e., basic and options in compliance with DFAR 204.7105-2 and to allow proper allocation of cost to the appropriate contract period (CLIN). The cost related to updating a non-repetitive document (i.e., Plans) which remain in effect for the entire anticipated contract will be applicable to the period when the updating occurs. The segregation by contract period does not require new document submission that is unrelated and without continuity to the previous period. Repetitive documents submitted in the basic period (i.e., status and cost reports) shall continue to be submitted according to the schedule established, throughout the life of the contract.

**INSTRUCTIONS FOR PREPARATION AND DELIVERY AND
DATA AND FOR INTERPRETING DD FORM 1423 (cont'd)**

3. Applicability of Data Item Description (DID). Only Block 10 of the DID is contractually binding. All other information or instructions contained in the DID should be considered information. Specifically instructions contained in Blocks 6a and 6b should be disregarded since all distribution is specified in Block 14 of the CDRL.

4. Acquisition Streamlining. It is the intent that minimum essential requirements be stated in all acquisitions. Where appropriate tailoring has not been applied, the technical office cited in block 6 of the CDRL should be contacted for guidance. References contained in DID pertaining to electronic media submission is not applicable unless specifically stated in block 16 of one time DID. Hard copy is to be assumed.

5. Submission to Technical Libraries (SMDC-IM-PL & DTIC). For technical documents prepared for submittal to technical libraries, ANSI Z39.18 should be used as a guide for preparation and format. Prepare a Report Documentation Page DD Form 1473, to be included as the first right-hand page after the cover. Only the approved report, where government approval is specified in block 8 of the CDRL, shall be distributed to libraries. Any report forwarded to DTIC shall be accompanied by a completed DTIC Form 50 for notifying the sponsoring agency of the assigned a number. This completed DTIC Form 50 shall be addressed as follows:

Commander
USASMDC
ATTN: [REDACTED]
Huntsville, AL 35807-3801

Blank copies of DTIC Form 50 are supplied by DTIC-FDAC, telephone [REDACTED]

6. Complete information for interpreting codes shown on the CDRL is contained in AR 700-51. Frequently used codes are as follows:

DAC	Days after contract award	OTIME	One time submission
MAC	Months after contract award	ONE/R	One with revision
EOC	End of contract	ASREQ	As required

7. In those instances in which a DID has been generated to fit a particular requirement, it is assigned a unique identifier code (e.g., OT-xxxx-xxxx).
