From left, Levi, Aaron and Amber Barraclough listen to a presentation given by Capt. Mitch Stevison, background, at the Kwajalein Mission Control Center Monday, as part of the range open house.

Gugeegue awaits word on CMI-Majuro

By KW Hillis
Feature Writer

The fall reopening of Gugeegue's College of the Marshall Islands campus now depends entirely on the results of this month's reaccreditation inspection of the Majuro campus.

"February is the pivotal point for everything else," said Dr. Wayne Schmidt, CMI president, during a recent visit to Kwajalein and Gugeegue. "If [Majuro] is not reaccredited, then we lose all U.S. monies."

Originally, both campuses were scheduled for separate reaccreditation inspections this month by the Western Association of Schools and Colleges. Gugeegue's campus closed at the end

RTS opens doors for tour

By Jim Bennett
Editor

Tyler Stepchew got to see what his dad, Jim, does for a living Monday.

The Stepchews were among more than 200 residents who participated in the Reagan Test Site Open House.

"It was awesome," the younger Stepchew said.

"It was a learning experience," added his father, who has worked on the range for years.

The 2½-hour tour revolved around four stops, the Kwajalein Mission Control Center, MPS-36 radars, Telemetry Hill and Aeromet, with bus rides in between where guides Jeff Beckley and Steve Hill offered tidbits of Kwajalein history.

At the KMCC, Maj. Diana Hansen, assistant programs manager for RTS, welcomed the groups and briefly described the variety of missions conducted at RTS.

Once inside, the tour groups sat in two rows before the massive control center screens, where Capt. Mitch Stevison, an RTS test director, presented a graphic demonstration and told them about not

only the types of missions at RTS, but also the assets used in each.

Of Ground-based Midcourse Defense Segment, he said, "It's a very complicated program and it brings us a good bit of business."

He described theater missile defense as "most difficult."

"In GMD you have a number of ranges working together. With TMD, we have one range handling all the functions, including the target and intercept launches," he said.

The range hosts at least three ICBM tests every year, which he called the "bread and butter event for the past 30 years."

Stevison further described the range's role in the space surveillance network. RTS' ALTAIR sensor identifies space objects and catalogs their locations to prevent collisions in the future.

In the role of observing new foreign launches, RTS has few peers, he added. Because of RTS' location on the globe, 75 percent of the launches from Asian countries must travel over Kwajalein

(See OPEN, page 4)

Kwajalein not targeted for vaccine

By KW Hillis
Feature Writer

Smallpox vaccinations are not coming to Kwajalein in the near future, but not to worry, according to officials.

Vaccinations are now available on a volunteer basis to healthcare workers across the United States and are mandatory for soldiers and certain civilians serving or preparing to serve for 15 or more days in a high-threat area, according to the Centers for Disease Control.

"At the present time, DoD priorities have not included immunizations at Kwajalein," said Dr. Eric Lindborg, Kwajalein Hospital chief medical officer.

As a result, Kwajalein Hospital has not received any vaccine, said

(See HOSPITAL, page 5)

Editorial

Don't blame me, my double wrote this column

I've always been fascinated by the idea of having a twin, especially an identical twin. As a child I wondered what it would be like; now, I wonder if I ever will be free of my double, who apparently moved to Kwajalein recently.

As a little girl, I knew one set of identical twins and they were fascinating. Think of it. Always someone to play with, two to take the blame, two to do chores, two to do homework and the ultimate fun of being twins, I thought, confusing parents and friends about which twin was which.

The fascination with twins stopped as I grew older and wanted to be unique like most teenagers. So of course, I emulated someone I admired in the way I wore my hair and the clothes I wore — unfortunately orange, my idol's favorite color, is not a good color for me, but I digress.

Growing up I not only forgot about wanting a twin, but I also forgot the old saying that everyone has a double.

At 18 years old, my double came forward, and although I have never met her, she has followed me through at least 16 moves across country, and now she has shown up here.

I promise I'm not being paranoid. I'm not talking about someone saying I look like a distant acquaintance. I'm talking about being mistaken for a close relative or close friend they saw the day before. Many have argued with me, convinced I

was trying to hide my real identity.

This reaction started right after I graduated from high school, on my way to St. Louis from Boston via Greyhound bus — both planes and trains were on strike that year. Via plane, that trip is about three hours; via bus, it is endless, and the bus-bound people used the time to get to know each other in the little lounge in the back of the bus. It seems that I already "knew" one of my highway-bound companions.

A lady with blue hair said to me, "Janet, I haven't seen you in months, how have you been?" It took the better part of four hours to convince this woman that I wasn't Janet, a long-lost niece of hers.

The second time I was mistaken for someone else was in the Casper, Wyo., hospital when my daughter was born. A lady walked by my hospital room door and performed the best double-take I have ever seen. She then shouted out, "Peggy, I didn't know you were having a baby?" That situation took a while to resolve and caused the nurses to double-check that I was really the right person to take my daughter home from the hospital.

Over the years I have found out that my twin is active in all sorts of clubs, goes by a variety of names, has anywhere from one to six children, is single and childless, is a sports fan, hates sports and

must have just cut, grown or colored her hair. They definitely didn't break the mold when I was born. Being mistaken for someone else has happened from twice to 10 times in every given year until the year I moved to Kwajalein.

After six months here, I thought I must have ditched my double. I kind of missed her — maybe she couldn't afford the air fare or couldn't find a sponsor.

Then LuAnne Fantasia showed up, and for the first time I was mistaken for someone I knew. But LuAnne is a good six inches taller than me, slimmer and her hair is definitely red. Although I'm very flattered, I began to suspect that maybe some people didn't really pay that much attention to how even their relatives looked. LuAnne and I do wear the same colors and my hair does look red in certain lights. As soon as I grew my hair long, the mistaken identity stopped.

Then just before Christmas, Kenny Winchester stopped me in front of Ten-Ten and asked me how long I have been running. He "saw" me running down the runway road. Last time I checked, I can bike, rollerblade and walk down the road, but running is out of the question. He was adamant that it was me. Then LuAnne lent me a book called "The Other Twin" by Ken Follett. The book was about cloning. Maybe I've been cloned, or worse yet, maybe I'm not the original.

But wait, there is a bright side, if my runner double is a clone; maybe she is a writer too. Hmmm — I could go diving, send her into the *Hourglass* to work. How would Jim even know? I hope someone introduces her to me soon.

By the way, when is the last time someone said to you, "You look just like ...?"

Stork News

Hannah Alexa Finley was born to John and Stephanie Finley, of Kwajalein, on Dec. 20, 2002. She weighed 7.37 pounds and was 21.5 inches long.

Orchids grow well on Kwaj

By Lynn Coppes
Feature Writer

Once called the flower of kings in nineteenth century England, orchids are now cultivated and grown by anyone willing to learn the basics of caring for this exotic and alluring family of plants.

Kwaj resident Jean Culberson started with one small orchid plant, and from there, she said, "I just kept going. Once you start in, it's hard not to resist a new type of orchid." Now she cares for more than 50 plants, their graceful flower sprays providing a colorful note in front of her home.

Orchids are divided into two groups: epiphytic, or air plant, which takes its nutrients from the air and rain; and terrestrial, meaning they grow in the ground and use soil to survive. Most of the plants seen on island are air plants, either in pots or simply clinging to trees.

Orchids aren't difficult to grow, Culberson stressed. And while it's generally thought that orchids are fussy, fragile and a lot of trouble, Culberson doesn't spend a lot of time on her plants. When you follow a few guidelines, she said, the rest is easy.

The majority of her plants are of the species called dendrobiums, which adjust well to the Kwaj climate – warm and humid – and flower profusely. They come in shades of purple, white, pink, yellow, green and red-brown. And once they flower, she said, they'll stay beautiful for many days, sometimes weeks.

Dendrobiums like a fair amount of light, preferably filtered light. The plants extract moisture from our humid air, although they need to be watered once or twice a week if there's no rain. "Basically, though, they're pretty drought-tolerant," Culberson said.

"To grow one directly on a tree," she continued, "simply tie it against the side of the tree with some coconut fiber or other material and eventually it will attach itself."

Probably the single biggest mistake people make in growing orchids is to water them too much. "Don't put a saucer under the pot," she said, "and it's better to enlarge the drainage holes in the plastic pots to ensure that the roots never become water-

(Photo by Lynn Coppes)

Kwaj resident Jean Culberson tends to her orchids. Culberson has more than 50 orchids and says they're easy to grow.

logged." Since the epiphytic plants don't use soil, potting material can be lava rock, gravel, coconut fiber or bark. Orchids like to be pot bound, but when repotting, only a slightly bigger container should be used.

To keep her plants healthy and blooming, Culberson uses one teaspoon of Miracle Grow or special orchid fertilizer per gallon every two weeks and even sprinkles the mix on the leaves. Snails can be a pest, and she recommends the snail bait at Self Help.

Sometimes new shoots will form at the end of existing stems and roots will form. Culberson advised cutting the shoot just below the roots and then potting. Often an older stem with no leaves will bloom, she added, so don't be too quick to cut off a stem until it looks completely dried out.

Macy's occasionally sells orchids, and Culberson advised getting over there immediately since the plants sell as soon as they're put out. She added that one of those would be a good first plant for someone wanting to get started.

"I love growing orchids," she said, "mainly because they're gorgeous, but also because I get so much enjoyment for so little effort. They're one of the most carefree plants that you can grow on Kwajalein."

Flowers have colorful history

Orchids have been around for a long time, according to Gloria Jean Sessler in her book, *Orchids and How to Grow Them*.

Ancient Chinese records dating back to 2800 B.C. give advice on the use of a dendrobium orchid for medicinal purposes. And throughout Japan, during this period, orchids were grown and enjoyed exclusively by the wealthy class.

The vanilla flavoring that we're all familiar with is extracted from the seed pod of one of species of orchids, which was first cultivated for use hundreds of years ago.

England was the first European country to actively pursue growing orchids in the early 1800s, and there are written records of the infamous Captain Bligh collecting orchid species to store on the *H.M.S. Bounty*.

In the 1830s a kind of craze swept through Europe, especially England, as people gradually became aware of the orchid's beauty and unusual growing habits.

Orchid hunters, anxious to cash in, put their lives on the line, traveling to the remote jungle areas of South America and the West Indies where they plundered the environment, grabbing every orchid in sight and leaving none to reestablish itself. The hostile and primitive environment, to say nothing of hostile natives, yellow fever, malaria and other diseases, apparently killed off quite a few of the collectors.

Unfortunately, because no one had the slightest idea of how to take care of them, thousands of plants died either on the long journey home, packed into the holds of sailing ships, or shortly after they arrived.

Meanwhile, in England, orchid mania was reaching new heights. Auctions were held with bids for exceptional plants going as high as 1,000 pounds sterling, about \$5,000 at the time.

In time, methods of growing and cultivating the plants became known, inflated prices for orchids came crashing down, and ordinary people were able to buy them at a reasonable price.

Open House gives groups look behind the scenes ...

(From page 1)

on the way to orbit. That allows the range to track the new objects into space and add them to the catalog.

And while most launches are pre-announced and known to the U.S., some are not.

"That's why we have to have a 15-minute recall," Stevison said.

For the past three years, the range has successfully tracked 100 percent of all new foreign launches.

Next, Stevison reviewed the vast array of assets at Kwajalein, such as the radar sensors on Roi-Namur and Kwajalein, the sonar array in nearby waters, telemetry towers and antennas and optics tracking equipment.

"You can see why we're a national asset," Stevison told the crowd.

The tour group next traveled to the nearby ALCOR console room adjoining the KMCC. The KMCC renovations under the Kwajalein Modernization and Remoting program bring all of the sensor functions into the single control center, though engineers and technicians still work at the various sensors to support the mission.

"Now we have everybody in one area during the missions and that makes it easier to coordinate," said Bill Kemp, ALCOR systems engineer.

After a brief simulation showing how crews track re-entry vehicles, the group moved to the Range Safety Control Center where engineers track the missiles during flight. If the missile should appear to be flying outside the safety area defined before the mission, the safety engineer can destroy the missile, said Jeff Compton, Flight Safety officer. The center also recently received upgrades, allowing it to track multiple targets and interceptors at the same time, a necessary function for GMD and TMD intercept tests.

The groups then boarded a bus for the MPS-36 radars, or Missile Precision Radars. Brought to Kwajalein in 1971, the radars have serial numbers 3 and 4, the first two radars built having gone to White Sands Missile Range in New Mexico, Beckley said.

Today there are about 60 such radars worldwide, "which is good for us because that means there are parts available," Beckley said.

At the MPS-36, Sensor Leader Cy Pizette explained the process of radar, which essentially shoots out a radio

Carol Hockenberger participates in a simulation, tracking re-entry vehicles during RTS' Open House Monday.

(Photo by Jim Bennett)

frequency and measures the waves reflected back from a given object.

"The key to how the radar works is the precise measurement of time," Pizette said.

And while the MPS-36 shoots a specific frequency over a precise bandwidth for tracking, the 31-year-old radars have some other tricks, as well.

The MPS-36 can track beacons on board re-entry vehicles as they fly toward the Earth at 17,000 mph or more. Also, the radars have telescopic video cameras mounted on the dish so that they can tape what they are tracking, if it's within visual range. The groups watched tapes from December's IFT-10 and last July's Patriot-3 Advanced Capability test.

Atop Mt. Olympus, or what is now called Telemetry Hill, the group toured the Telemetry control room and the various domes encircling receiver dishes where engineers receive raw data, sometimes even video, transmitted by target and interceptor missiles, alike, explained Pat Dowell, Telemetry leader. The unit sometimes participates in NASA operations, receiving telemetry data from spacecraft flying overhead.

At nearby Aeromet, Annette Barnhill described the dual-polarized radar, which tracks vertically and horizontally at the same time, allowing it to distinguish between rain and ice, for example.

Barnhill further pointed out the variety of instruments, both computerized and traditional.

"We don't just take one piece of equipment's data and run with it. We

really compare," she said.

Inside, surrounded by radar and other sensor images, meteorologist Frank Robitaille described the process of creating a forecast using radar images, observations and numerical models.

Besides the public forecast, Aeromet meteorologists produce the aviation forecast for the FAA, provide mission support for the range and issue advisories for all, when necessary.

Aeromet launches two balloons daily and occasionally meteorological rockets to obtain data from high aloft in the atmosphere, said J. Mark Fair, Aeromet site manager.

The 17-member crew works heavily with NASA and the National Oceanic and Atmospheric Administration on a variety of experiments including a solar radiation experiment and a rainfall measurements program that, using a sensor plate the size of a soup can lid, measures the raindrop size and number by the sound of each drop striking the plate. Counting the drops and measuring the drop size, the sensor contributes data to a study on rainfall around the world.

The tour worked out well for the range and participants, according to Hill, who added "we got a lot of positive feedback."

Jim Hockenberger, an eight-year resident over two tours, agreed.

"I thought this would be a good opportunity to see the inner-workings of what goes on here," he said. "I learned some things. There were a few things I didn't know we had a hand in."

Hospital set to follow guidelines ...

(From page 1)

Valerie Janikowski, Kwajalein Hospital Outpatient nurse manager.

With the vaccine come risks, Janikowski said.

"People that administer the vaccine are trained ... Hepatitis A and B are not live vaccines; smallpox is live."

In addition to healthcare worker training, the shipping, storing, administration of the live virus and caring for the vaccination site itself falls under specific guidelines, she said.

"It is the hospital's intent to follow all DoD guidelines if the DoD directs that Kwajalein administer the vaccine to active duty personnel and, on a volunteer basis, to medical personnel who may be involved in immediate stabilization and care for potentially infected patients," Lindborg said.

Although the virus is live, it is not a smallpox virus and cannot cause smallpox, the CDC said. The vaccinia virus is related to smallpox and is a "pox"-type virus. When administered, it helps the body develop immunity to its more virulent relative.

But the vaccinia virus can spread if not handled correctly or if the vaccination site is not cared for properly, Janikowski added. The vaccination itself is different from the normal "shot," she said. A two-pronged needle, dipped in the vaccine, is used to prick the skin rapidly many times.

Because the vaccine is not benign, a list of who should not receive the vaccination is long and includes people with eczema or skin conditions, pregnant women, people living with children under a year old and anyone with a compromised immune system, according to the CDC. Some people who

receive the vaccine do become ill and one or two out of a million die.

President George W. Bush announced on Dec. 13 the creation of the volunteer Smallpox Response Teams, in case of a biological terrorist attack, and since then federal and state health officials nationwide are making sure that the smallpox vaccine is available for use across the country.

Within a month after Bush's announcement, the Institute of Medicine of the National Academies, an adviser to the CDC, released a flurry of recommendations, guidelines and protocols about smallpox and the vaccine, said Frank LaBarge, Kwajalein Hospital pharmacist. In daily contact with Honolulu's Tripler Hospital officials about medications or vaccines available, LaBarge said that he doesn't see the smallpox vaccine coming to Kwajalein any time soon.

Kwajalein residents shouldn't worry though.

"The Army would do what they need to do, if there was any emergency," said CW3 Wiley Blanton, USAKA Food/Medical evaluator.

Smallpox is a highly contagious disease, which is fatal in 30 percent of those infected, and it can leave its surviving victims disfigured. Somalia had the last documented natural case of smallpox in 1977. In the U.S., the last case was in 1945, and regular vaccinations ceased in 1972, although military members were vaccinated on a regular basis until 1984. The only prevention for smallpox is vaccination, according to the CDC.

For more information on smallpox, see the CDC Web site: www.cdc.gov.

Parents can help out ...

(From page 12)

only 7th- to 12th-graders use the facility.

Simone Smead, Community Activities manager, noted that in the past, there has been considerable concern for the welfare of our young people on island.

"Getting parental support and getting them involved in our kids' activities can help alleviate some of that concern," she said.

Said Cole, "This is the perfect position for a parent who would like to become more involved in the community and to interact with their own kids and their friends." Cole would like each person to make a commitment of two shifts a month.

"That way," she said, "people won't feel like they're tying up their weekend evenings on a constant basis."

At present, only one supervising adult is needed at the facility at a time, but in a few months, two will be required.

The Youth Center is open for parents to visit any time it's open, and they're encouraged to stop by to see what the facility has to offer.

"With a minimal commitment by some of the parents or single-status people, the Youth Center will flourish," Smead said.

For more information, call Cole at 53331.

Gugeegue campus to become Majuro satellite school ...

(From page 1)

of the 2002 spring session to bring its buildings, policies, class offerings and faculty up to WASC's standards. The Majuro campus continued to provide classes while upgrading policies and classes.

Now a separate reaccreditation is not necessary because Gugeegue's campus will be a satellite school, offering only developmental and first year classes, rather than a separate school offering a two-year associates program, Schmidt said.

One of the biggest changes required for reaccreditation affecting both cam-

pus is that "there is no social promotion anymore," Schmidt said. This change is a result of requiring "a specific set of things that students will be able to know and do and that we can prove by student."

Previously, both campuses did try to identify and help students who were experiencing difficulty in a class.

"We were addressing it but not formally," said Jonathon Cassel, Gugeegue CMI Academics director. "Now each student will have to acquire the skills to get to the next class."

On Feb. 21, WASC will give an infor-

mal, oral inspection summary, and CMI will know if it has any future, Schmidt said. If the results are positive, the school won't wait on the formal written response due in June, but will start hiring a dean and six to nine teachers for Gugeegue.

"When [Majuro] is accredited, that is the last stumbling block," Schmidt said.

Future students are already clamoring to sign up for classes at Gugeegue, Cassel said. To get on the waiting list, Ebeye residents should call CMI executive assistant Kiorong Sam, 235-5153, mornings, or 329-8033, afternoons.

(Photo by KW Hillis)

With Huong Brock pointing the way, 3-year-old Amelia Kemp uses her new Start Smart Soccer skills to dribble the ball during a short scrimmage at the CRC gym.

Tiny ones learn smart soccer moves

By KW Hillis
Feature Writer

Preparing for a throw-in, 4-year-old Darian Wheeler, with number 15 emblazoned across her red soccer shirt, looks left and then right and hurls the ball. Ten pairs of shin guard-encased legs propel tiny bodies forward toward the bouncing ball — a Start Smart Soccer scrimmage for 3- and 4-year-olds is underway at the CRC.

"It's an introduction program and the parent has to be involved," said Erika Cole, Community Activities Youth Activities supervisor. "The focus is on developmental or motor skills." Monday mornings for six weeks, the 20 children and their parents meet for

40 minutes of drills and, this Monday, a scrimmage. Before the scrimmage, the gym is divided into four stations concentrating on different fundamental soccer skills: kicking, passing and shooting; trapping or stopping the ball; dribbling; and throw-ins and agility.

"It gives them a good introduction to the sport and the skills," said Wheeler's mother, Gretchen. "She loves it. She is asking me all week, 'Is this my soccer day?'"

After learning soccer rules and moves for two years, Mike Cheatham said he thinks 3-year-old Claire will do well when she does get into organized games.

"It's good for me too. I'm learning the rules," Cheatham added.

Volleyball Schedule

Friday, Feb. 7
5:30 p.m. Spike My Drink/Spartans I
6:30 p.m. ... Mix&Match/Spartans Coed

sequences of conducting test flights of the THAAD missile over the Pacific Ocean. The Proposed Action would involve THAAD interceptor missile launches and THAAD radar operation from a site at the Pacific Missile Range Facility (PMRF) located on the island of Kauai, Hawaii. An alternative to the Proposed Action would be use of the Ronald Reagan Ballistic Missile Defense Test Site (RTS) in the Republic of the Marshall Islands. A second alternative would involve a combination of some or all of the proposed activities described in the Proposed Action, test flights at PMRF, and some or all of the alternative actions at RTS. Up to 50 THAAD interceptor missiles and 50 target missiles could be launched over a four-year period. The next phase of THAAD flight-testing is currently scheduled to begin in late fiscal year 2005 and would continue through at least fiscal year 2010. The public comment period on the EA and draft Finding of No Significant Impact (FONSI) has been extended through 20 February 2003. Written comments, faxed comments, or a request for a copy of the EA and draft FONSI should be directed to: U.S. Army Space and Missile Defense Command, ATTN: Mr. Thomas Craven, SMDC-EN-V, P.O. Box 1500, Huntsville, AL 35807-3801, Fax: (256) 955-5074. Comments will not be accepted through electronic mail. Interested parties can also review the EA and draft FONSI at the following locations or on the Internet at <http://www.smdcen.us/pubdocs/>, Lihue Regional Library, 4344 Hardy Street, Lihue, HI 96766; Waimea Public Library, P.O. Youth Center seeks help

By Lynn Coppes
Feature Writer

With only one parent on staff, Community Activities is looking for people to help work at the Youth Center on weekends.

"I enjoy it and have a great time with the kids, especially the younger ones," said Paul Balag, the only parent currently working at the Youth Center. "It's a wonderful place for them to go to relax and hang out with their friends without a lot of restrictions. They have to abide by the rules of course, but I pretty much allow them to do what they want to do."

He added that when he found out that help was needed at the center and without it the kids wouldn't be able to use the facility, he signed up. Balag, a father of three, emphasized that "kids need a place to go where there are

activities and things for them to do together."

The center needs people specifically Saturday and Sunday nights, 7 to 11 p.m., and during the Sunday movie matinee at 3 p.m. for approximately two hours.

"We need your help," said Erika Cole, Youth Activities supervisor. "Right now, all we have is one parent on our staff. We need several more." She added that it was predominantly the single-status residents who have responded in the past, and she appreciates their support.

This is an hourly paid position that has recently been upgraded to the highest paying Communities Activities part-time position in the department. The main responsibility is to supervise kids from the 3rd grade to the 12th grade at the center. After 9 p.m., however,
