Why are some people so eager to surrender western culture?

Who would have thought that the children's story, *The Three Little Pigs*, written 150 years ago, would create any kind of controversy. This fairy tale has been enjoyed by children the world over. I'm sure most of us read it as children and have read it to our children, and some of us have read it to our grandchildren. But, of course, these days it doesn't take much to cause controversy and anyone can be 'offended' by anything it seems.

Have you heard about the children's music festival that was being organized in Yorkshire, England? There were 63 schools that were going to be involved in it. Apparently, one of the schools was going to stage a musical production of *The Three Little Pigs*, but the organizers ordered the school to change the lyrics and name from *The Three Little Pigs* to *The Three Little Puppies*.

Why did they do that, you ask? Because the organizers were afraid that singing about pigs would be offensive to Muslim children and their parents. The Islamic religion forbids Muslims to eat pork. But singing about pigs?

Well, after much consternation and protesting from non-Muslim parents and some city officials, *The Three Little Pigs* original lyrics were reinstated. Funnily enough, even some of the local Muslims said they weren't offended by singing

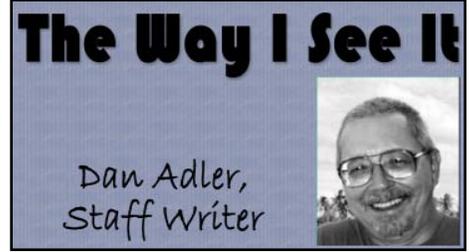

about pigs. But what if they had been? Would there have been violent protests? Would *The Three Little Pigs* have ever seen the light of day at that music festival?

If the organizers of the event felt so strongly about being sensitive to Muslims, they might have known that Muslims consider dogs to be 'unclean' and 'offensive.' So, ordering the lyrics to be changed to *The Three Little Puppies* was just as stupid as banning the original lyrics in the first place.

It's amazing to me why some people in the western world are so eager to surrender their own cultural and religious beliefs in order to be 'sensitive.'

This is only the latest in a string of asinine politically correct moves that have been made in many European countries in order to placate their immigrant populations (which they are scared to death of).

What's happened in Europe over the past few decades and what is happening in America right now shows that diversity is a wonderful thing up to a point. It's great until you have so much diversity that you don't have your country or your culture anymore. The Islamic immigrants that flooded European countries over the past years never had any intention of assimilating into the cultures or beliefs of the countries

they immigrated to. That's why so many second and third generations of those immigrants don't consider themselves British or French or Dutch. They still cling to the culture, beliefs and religions of the countries they came from.

In fact, far from wanting to assimilate, they want just the opposite. They want to impose their culture, religion and way of life on the citizens of the countries they live in.

Can it happen in America?

How many people have flooded across our border from Mexico and South America who can't or won't speak English? How many politically correct people in America are eager to surrender our common language and culture so as not to be 'insensitive' or 'racist?' The immigrants who came to America from Europe in the 1800s and 1900s were all looking for the same thing—freedom. But they realized that they all

Letter to the editor

Russell thanks Kwajalein friends for packages, letters

Dear Hourglass Staff,

First, my two Soldiers and I have returned home safely to Colorado after our tour at Camp Fallujah, Iraq. I am blessed to have only done a 'short' tour, and it is great to be home. Every Soldier I met supporting the war was motivated and doing the right thing for his / her country.

Be proud of them all.

Second, thank you for posting my address in the paper, and thank all my Kwajalein friends for sending me and my team care packages and letters. It makes the time spent away easier.

— Maj. Mike Russell

THE KWAJALEIN HOURGLASS

The *Kwajalein Hourglass* is named for the insignia of the U.S. Army 7th Infantry Division, which liberated the island from the forces of Imperial Japan on Feb. 4, 1944.

The *Kwajalein Hourglass* is an authorized publication for military personnel, federal employees, contractor workers and their families assigned to U.S. Army Kwajalein Atoll. Contents of the *Hourglass* are not necessarily official views of,

or endorsed by, the U.S. Government, Department of Defense, Department of the Army or USAKA. It is published Wednesdays and Saturdays in accordance with Army Regulation 360-1 and using a network printer by Kwajalein Range Services editorial staff.

Science students compete in bridge-building project

By Nell Drumheller
Editor

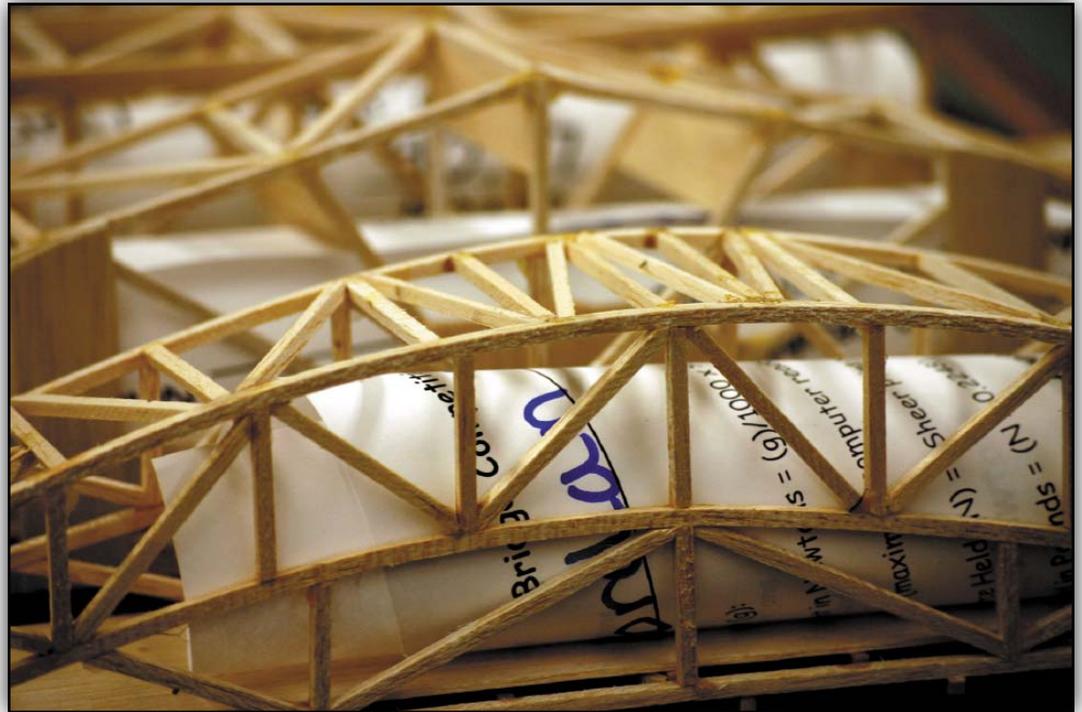

All 140 students in science classes in grades 7-12 participated in the bridge construction project for this year's science competition.

The Davye Davis Multi-Purpose Room was filled on Friday as students, parents and teachers milled around, waiting for the results of stress and strength tests on the balsa wood bridges.

In the end, junior Rachel Stepchew, 17, built the strongest bridge.

"The students had one week to build the bridges. Many of the students worked an extra hour before school and an hour after school every day of the week to complete their bridges on time," Brian Brewster, science teacher, said.

The goal was to build the strongest bridge by weight. "All of the materials were supplied, but the students had a limited amount of wood to work

Balsa wood bridges built by Kwajalein junior/senior high school science students are lined up to see which one is strongest during the science competition Friday. (Photos by Nell Drumheller)

with. Their designs had to use the limited materials as effectively as possible. Once they had used up their 18 pieces of wood, they did not get any more," Brewster said.

Stepchew attributed her success to hard work. "I really like bridges and architecture," she said. "I spent like 20 hours making sure it was perfect." She added, "I used a lot of wood. My bridge was one of the heaviest."

Brewster described the bridge-building process:

First the students did Internet research learning about structures, materials, and what makes strong bridges as well as the different types of bridges. The stu-

dents were tested on this information.

After the research, "We built bridges out of drinking straws and hot glue to gain an understanding of the build process as well as to understand how to make bridges both strong and light," Brewster said.

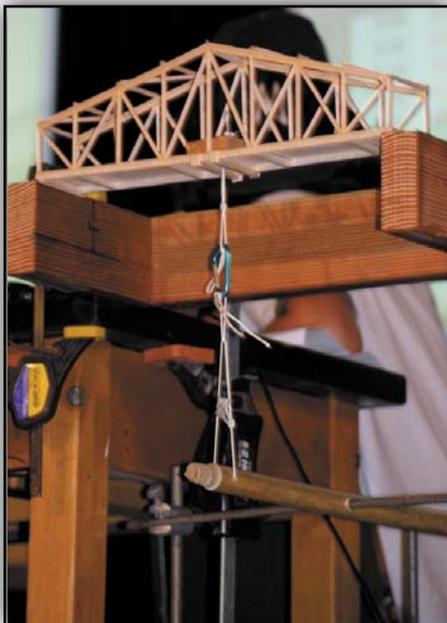

"We used several computer programs to help test bridges and to refine student designs. The computer program helped students see where the weak points on their structures were and then make modifications to improve it. The last step was to draw a scale model of their bridge from the side and from the top views," he added.

"We built our balsa bridges directly on top of the scale designs by laying wax paper over the drawings and supporting the bridge on cardboard while the pieces dried in place."

Brewster said all of the designs had to be

approved by the teacher before the students could begin building. "The students could use any design that they wanted, but it had to be a correct scale drawing to pass inspection," he said.

This is the third time, in the past seven years, bridge building has been the project for the science competition. "These bridges were vastly improved over previous years. Our average strength-to-weight ratio for all of the bridges this year was 324. Last time it was 187. This shows the students worked extremely hard on their designs, and that we are improving as teachers on the advice and direction that we are giving to students. We are still giving the students complete freedom in their designs, but the instructional time leading up to the building is helping to guide

A bridge is ready to be tested.

Diving expert Wienke gives presentation at annual safety meeting for Kwajalein Scuba Club members

By Nell Drumheller
Editor

The Kwajalein Scuba Club sponsored an internationally-respected scientist on island last week. Dr. Bruce Wienke, Ph.d., was the guest speaker at the club's annual safety meeting.

Wienke, a program manager in the Nuclear Weapons Technology/ Simulation and Computing Office at the Los Alamos National Laboratory, New Mexico is also an expert on diving.

"I like to visit military communities and I like to talk about diving," Wienke said. Wienke developed the reduced gradient bubble model algorithm that is used in many modern dive computers.

"This isn't rocket science," Wienke explained of the process. He said that in comparison to the other research he does, this is basic high school level work.

His lab and field work have revolutionized the understanding of bubbles and how they affect humans in deep water dives.

Specifically, he endorses deep safety stops, "This should have happened 50 years ago," he said of the research and acceptance which has popularized safety stops in deep diving. Using deep water stops has increased safety in both technical and recreational diving, according to Wienke. But it wasn't an easy change, "there's been a lot of resistance," Wienke said.

In his presentation last week, Wienke said the deep stop theory began to surface in the diving world in the 60s and early 70s. He related that Australian deep-water divers went to depths of 300 feet, twice a day, six days a week, ten months a year with higher incidences of decompression sickness, but not as high as should have happened according to the standardized dive tables used commercially by the U.S. and British Royal Navy. Those tables were the generally accepted standards at the time. According to the tables, those divers should have been dead. But the Australian divers had learned by listening to their own bodies. They had evolved a decompression strategy that kept them alive. They were making deep stops. The standardized tables suggested they should be making a decompression stop at 50 feet. Instead, the Australians were making a deep stop at half their dive depth, or 150 feet. "It was heresy in the early days," Wienke said of the deep stop theory. "In the field, what works, works. What doesn't gets thrown away." These divers, both in Australia and some deep water fishermen in Hawaii developed deep water decompression strategies that worked for them. The technical and medical communities took notice. "They gained acceptance among divers who were doing this everyday, but not with the Navies who held to the old tables," Wienke said.

The deep stops work. "You're controlling bubble growth if you're making deep stops," Wienke explained. "Deep stops will hold the bubbles at a deeper pressure and prevent them from growing too rapidly. Then as you come to the surface, you are effectively eliminating bubbles instead of treating bubbles."

Wienke and his colleagues use a database of more than 2,800 mixed gas, decompression cases to study deep-dive decompression issues.

How did he end up on Kwajalein talking to a group of water enthusiasts? He last visited Kwajalein about 20 years ago, while serving in the U.S. Navy. He was contacted by KSC members Cowboy Galloway and Rick Zurawski, who asked him if he'd be interested in coming to the islands. Wienke jumped

at the chance, he checked his schedule and was able to squeeze Kwaj into a space between two other engagements. He was leaving Kwajalein and heading to Colorado where he was scheduled to compete in a downhill skiing competition.

Perhaps some of Wienke's presentation was over the heads of some of the divers in the room, but the presenter's enthusiasm wasn't lost on the audience. Wienke, a diver with more than 45 years in the water, leads a life with nuances of the Indiana Jones character. He is not only an internationally-recognized dive expert, but also a member of the Los Alamos Nuclear Laboratory Nuclear Emergency Strategy Team, in exercises involving Special Operations with SEALs and Delta Force above and below the water. He is a windsurfing, tennis, mountain biking and snow skiing enthusiast. And if that's not enough, he quarterbacked the '63 Northern Michigan Wildcats to an NCAA II championship at the Hickory Bowl. Wienke received a bachelor's of science degree in physics and mathematics from Northern Michigan University, master's in nuclear physics from Marquette University, and doctorate in particle physics from Northwestern University.

But on Kwajalein, after he put away his PowerPoint presentation, Wienke was a diver. He spent two days in the water. On the second day he dove the Prinz Eugen. "I was excited to dive the wreck," he said of the Prinz Eugen. "I didn't realize it was out here," he said, with a twinkle in his eye.

So while Wienke brought a depth of knowledge to the divers of Kwajalein, perhaps the waters of Kwajalein offered him something to remember.

Internationally-respected diving expert Dr. Bruce Wienke visited Kwajalein last week and gave a safety presentation to Kwajalein Scuba Club. (Photo by Mike Malone)

students to better building techniques and improved designs,” Brewster said.

“The students applied the scientific method to a real-world problem. They used computers to help come up with the best design possible and then had to build it. In addition to learning about structures, students applied math and measuring skills to help draw their scale models. Students were forced to plan ahead to make sure they had the supplies needed for their designs and to make sure that they would finish on time,” Brewster said. “The hands-on building was

also a challenge for many as they learned the best ways to piece their bridges together. It was great to see students working together on this project as they helped each other out even though they were competing against each other.”

Once the bridges were built, there had to be a process to test them. Brewster said it would have been possible to purchase a testing device, but that would have cost thousands of dollars. Instead, the science teachers decided to see what they could come

up with. “We used force sensors that the department already owned and connected them to a lever arm to multiply the force. This way we could use a force sensor that is only designed to measure up to 50 Newtons [11 pounds] to test bridges that could hold close to 350 Newtons of force [80 pounds]. Last time we had the competition we poured sand into a bucket underneath each bridge until it broke. This was both inaccurate and slow. Our device this time allowed us to finish testing all of the bridges

in 90 minutes,” Brewster said.

The device works like a see-saw. “The student used the force sensor to pull up on one side and the other end pulled down on the bridge. The sensors were connected to computers that collected the data and allowed us to measure very accurately the exact shear point [point of failure] of the bridges,” Brewster said.

Stepchew’s bridge tested the teachers’ device almost to its maximum capacity. It held 77 pounds. “She came within three pounds of maxing out our testing device,” Brewster said.

Sweet Feet take women's softball title, USAKA Raiders win men's AI slot

Hourglass reports

The 2007 Softball Season ended Saturday when Sweet Feet defeated Ebeje, in two games, to take the Women's title and USAKA Raiders defeated Mon-Kubok, in two games, capturing the Men's B league championship. Two other titles were determined earlier in the week. Podunkers defeated Criminals in two games taking the Men's A title, and the Men's B crown went to Pacific Flyers after they defeated Spartans II in two games.

The 29-teams covered four categories in this season's play. There were eight teams in both the Men's A and Men's A1 categories; four teams in the Men's B category and nine teams in the Women's category.

"There were a lot of highlights during the season, but it seemed like different players took the forefront at different times, offensively and defensively," Billey Coley, Kwajalein Range Services Adult Athletics' supervisor, said.

This season differed from past play in the make-up of the Men's Divisions. "Normally there are three divisions: A, B and C," Coley explained. "This year, we did not have enough teams for a separate A division, so the teams signed up in A and B were combined into the A and A1 divisions."

He added, "This was a very competitive and enjoyable season. I would like to thank the workers, players and spectators who made the season such a success."

Mon-Kubok third baseman Robert Sam gets the ball a moment too late as Mike Saltzman, USAKA Raiders, beats the throw.

Tournament results

Women's Game 1	Women's Game 2
Sweet Feet 10	Sweet Feet 11
Spartans I 9	Ebeje 4
Men's A Game 1	Men's A Game 2
Podunkers 11	Podunkers 12
Criminals 3	Criminals 4
Men's AI Game 1	Men's AI Game 2
USAKA Raiders 11	USAKA Raiders 13
Mon-Kubok 5	Mon-Kubok 6
Men's B Game 1	Men's B Game 2
Pacific Flyers 14	Pacific Flyers 10
Spartans II 2	Spartans II 5

Meanwhile, over at the family pool, the Inner Tube Water Polo season is in full swing and basketball begins Tuesday.

Beth Wiggins, shortstop for the Sweet Feet, blasted a home run at her first at bat for the tournament. Each time she came to the plate after that she was intentionally walked.

THE MOBILE KITCHEN presents Mahi Madness at 7 p.m., March 31, at the Pacific Club. Menu to include chicken, eggplant, red onion quesadillas, garden salad, dinner rolls, grilled mahi mahi with spicy papaya salsa, garlic mashed potatoes, stir-fried vegetables and Black Forest trifle dessert. Seat \$25, \$20 for meal-card holders. Purchase tickets at Three Palms Snack Bar.

THE 28TH ANNUAL Rustman is scheduled for April 30. The event consists of a 1K lagoon swim, a 42K bike course and 10K run. Kwajalein Running Club needs race day and race time volunteers. To volunteer, call Bob or Jane, 51815. Race entry forms will be available April 1.

ATTENTION HIGH SCHOOL SENIORS planning to go on college or trade school should pick up a scholarship application at the Kwajalein Range Services Human Resources office in Building 700, or see your high school guidance counselor. This opportunity is for Kwajalein and Ebeye high school students whose parents are employed at Kwajalein or Roi-Namur. Deadline for applications is May 10. Call 55154.

HIGH SCHOOL juniors, seniors and college students. Are you looking for a summer job? Kwajalein Range Services has a variety of summer employment opportunities in office and technical support and positions working with the Child Development Center. For more information, come to Human Resources in Building 700, or call 54916.

had to become one people with one common goal in order to stay free. They knew they weren't Germans or Italians or Irish anymore. They were Americans. They were still proud of where they came from. They were proud of their heritages. But that was left behind when they set foot on America's shores. They kept their religions because in America you were free to worship without fear.

But, wherever they came from or whatever God they believed in, their allegiance was first and foremost to the idea of a united, strong and free country. Their allegiance was to America.

They learned the English language so as to become one people. Because by becoming as one, they would be strong and prosperous.

People also came from Asia and other parts of the world. And everyone who came brought the desire to contribute to the country that took them in and gave them the freedom to follow their dreams and a sense of self worth.

And again, while being proud of their heritage and the cultures of their old countries, they assimilated into the new culture and made it stronger.

What has happened to that these days?

Just recently, we've heard stories of immigrant Somalian Muslim cab drivers in Minnesota who refuse to pick up people who are carrying bottles of liquor because liquor is against their religion.

We've heard stories of immigrants who work as cashiers in supermarkets and refuse to ring up customer's purchases of pork because it's against their religion.

I ask these people who won't learn English and who won't assimilate into our culture of tolerance, religious and otherwise . . . why did you come to America?

I can only surmise that life in places like Mexico, South America and Somalia isn't too good.

So if that's the case, why do you try to replicate it here? Why do you refuse to speak the language? Why do you refuse to be tolerant of others while expecting them to be tolerant of you?

We only ask that you become part of the fabric of our society and not try to rip it apart instead.

We don't tell you what religion you can practice. We don't tell you to be ashamed of your heritage or where you came from. We allow people to join our new heritage while letting them honor their old

ones. We only ask allegiance to our country in return.

I can only say to those who don't want to be part of our one people, who don't share our common values and goals, who don't feel any loyalty to our nation and who would force their religion, their culture and their way of life on the rest of us . . . it's hard to welcome you.

Yes, we celebrate diversity, but as it relates to making the whole stronger.

What some well-meaning, politically correct people in the world don't seem to realize is that the people they are being sensitive to and tolerant of, would not, if given the chance, be very tolerant or sensitive to them.

Yes, diversity is a great thing. America was built on it. But let's be careful not to diversify ourselves right out of our country.

THE EASTER BUNNY SAYS
