# SMDC commander: Reagan Test Site integral to future U.S. national security

Article and photos by Jordan Vinson

Associate Editor

Army Lt. Gen. David Mann flew into the Republic of the Marshall Islands last week to meet the men and women who live and work on one of the most far-flung and remote U.S. military installations under the Pentagon's domain: the Ronald Reagan Ballistic Missile Defense Test Site, part of the U.S. Army Garrison-Kwajalein Atoll. He took the opportunity to get a first-hand look at the technology Army soldiers, DA civilians and civilian contractors use to execute missions for the U.S. Army Space and Missile Defense Command in the area and emphasized the relevance and increasing importance of the test range in an era of a rapidly changing way of war.

Having assumed leadership as the commanding general of the U.S. Army Space and Missile Defense Command/Army Forces Strategic Command at Redstone Arsenal, Ala. six months ago, this was the three-star lieutenant general's first opportunity to put his boots on the coral sands of U.S. Army Garrison-Kwajalein Atoll and the SMDC's Ronald Reagan Ballistic Missile Defense Test Site.

"The mission that we do out here is critically important to our nation-

al security and security globally," he told a crowd of Army personnel and civilian contractors who gathered to hear him speak Feb. 27 on Kwajalein inside the island's Corlett Recreation Center. "A lot of folks, quite frankly, don't know that."

Both the Army garrison and the ballistic missile test range are, indeed, far cries from many other U.S. military installations peppered in the Pacific and to the west in East Asia. There are no aircraft carriers here, nor any battalions of soldiers or Air Force groups. But the test site boasts some of the most powerful leading-edge radar technology deployed by the military to identify and track airborne threats that may spring up around the world and thousands of miles deep into Earth's orbit. These defensive capabilities, coupled with its impressive

track record in weapons testing for the military and other federal and private clients, make the Reagan Test Site a key player in the United States' ability to maintain its post-Cold War military superiority in an era in which the nature of threats to national security are rapidly changing.

A defense budget proposal released two weeks ago by Secretary of Defense Chuck Hagel reflects a di-

SMDC Commanding General Lt. Gen. David Mann discusses Army budget cuts at a "town hall" meeting with dozens of USAG-KA personnel and civilian contractors at the CRC late last week.

minishing concern among leaders at the Pentagon with traditional ground-based threats. Part of the Bipartisan Budget Act agreed to by President Barack Obama and Congress in December, the proposed \$496 billion spending cap on defense purposes in fiscal year 2015 aims to cut the number of active-duty soldiers to between 440,000 and 450,000—a nearly 23 percent slash from the post-9/11 peak of 570,000. If the spending

## THE KWAJALEIN HOURGLASS

The Kwajalein Hourglass is named for the insignia of the U.S. Army 7th Infantry Division, which liberated the island from the forces of Imperial Japan on Feb. 4, 1944.

The Kwajalein Hourglass is an authorized publication for military personnel, federal employees, contractor workers and their families assigned to U.S. Army Garrison-Kwajalein Atoll. Contents of the Hourglass are not necessarily official views of, or endorsed by, the

U.S. Government, Department of Defense, Department of the Army or USAG-KA. It is published Saturdays in accordance with Army Regulation 360-1 and using a network printer by Kwajalein Range Services editorial staff.

**Lt. Gen. Mann and RTS Technical Director Tim Kirchner watch the ARPA Long-Range Tracking and Instrumentation Radar (ALTAIR) demonstrate the speed at which the massive structure is able to rotate and adjust its position on the fly.**

plan is passed, the Army's force will be reduced to its smallest size since before the start of WWII.

While some lawmakers and opinion leaders have vowed to push back against the budget proposal, arguing that it will hurt America's military readiness, the plan has the blessings of the Joint Chiefs of Staff, all of whom worked with defense secretary on the budget plan, including Army Chief of Staff Gen. Raymond Odierno.

"We are repositioning to focus on the strategic challenges and opportunities that will define our future: new technologies, new centers of power and a world that is growing more volatile, more unpredictable, and in some instances more threatening to the United States," Hagel said during a press conference. The reductions, he said, would contribute to an increasingly agile, flexible and smart Army with grossly superior technology in the battlefield and would shelter priorities in the research and development of new technologies to come.

"When we look at the nature of the threat, it's primarily ballistic missiles and things that are happening in space," Mann said. "We're becoming more and more committed to space for our everyday existence. So it's very important that we continue to test leading-edge

technology and that we continue to achieve some level of dominance in those different areas."

The lieutenant general explained that the SMDC will have to tighten its belt in some ways in the future. The acquisition of new weapons systems, for instance, will not be in the cards for the test site and the command, at least in the near future. Instead, he said the SMDC is working very closely with the Missile Defense Agency to look at how

its Army leadership, engineers, researchers and program managers can best use the resources they already have to refine and advance their capabilities.

"There's not a lot of appetite at the Department of Defense for big acquisition programs, just not a lot of appetite," he said. "The focus right now is taking what we have right now and optimizing it, whether it's a common exoatmospheric kill vehicle ... or upgrades to that, whether it's improved sensor discrimination so that we're able to really look at a target complex and figure out what the target vehicle and be able to optimize our shots. So that's kind of what the nature of the environment is in D.C. right now—don't put a big acquisitions, a big program out there, take a look at what you've got."

During his four-day visit to the Reagan Test Site and U.S. Army Garrison-Kwajalein Atoll, Mann toured the test range's array of radar and optical instrumentation used for day-to-day space object tracking missions and the testing of weapons systems like Minuteman-III intercontinental ballistic missiles, the Terminal High Altitude Area Defense anti-ballistic missile system and submarine-launched Trident ballistic missiles.

He was accompanied by Julie

**See MANN, page 4**

## MANN, from page 3

Henry McElreath discusses features and capabilities of the *K.M.R.S.S. Worthy*, a missile range instrumentation ship used by the U.S. Army Space and Missile Defense Command during weapons testing missions.

Schumacher, Director, Technical Center; Col. Lorenzo Mack, SMDC deputy chief of staff for operations; Lt. Col. Steven Bording, PACOM Liaison to SMDC; Maj. Mark Cobos, Aide de Camp to the SMDC commanding general; and John Klemencic, Trip Planner.

Their visit came during a frenzied stretch of time for the Army garrison on Kwajalein Atoll. The commanding general of U.S. Army Pacific, Gen. Vincent Brooks, made a similar tour of the test range and Army garrison a few weeks prior. And the garrison appointed a new senior enlisted advisor, Command Sgt. Maj. Reginald Gooden, about two weeks ago. Mann said he would make a point to come out to the Reagan Test Site,

one of four major sites within the SMDC's Space and Missile Defense Acquisition Center, headquartered in Huntsville, Ala., more frequently.

A one-hour flight over azure expanses of ocean to Majuro was a nice change of pace for Mann near the end of his visit. It was there that he met Christopher Loeak, president of the island nation, and other Marshallese political leaders.

Mann also took the opportunity to visit Ebeye, the second-largest urban area within the Marshall Islands after Majuro. He took the trip with USAG-KA Commander Col. Nestor Sadler, Command Sgt. Maj. Reginald Gooden, Maj. Matt Sova, director of Host Nation Activities for USAG-KA. Upon arrival, they

were met by Ebeye Mayor Johnny Lemari and a cadre of other local officials. The Ebeye Community Center, where the island's local schools were holding a spelling bee contest as part of the Marshall Islands' Education Week, was one of the stops the group made. They also toured some of the island infrastructure with stops at the Ebeye water treatment plant, the power plant and the island's beach park area.

Mann, who flew back to the SMDC headquarters on the Redstone Arsenal in Alabama late last week, will use what he learned on the ground at the Reagan Test Site and the greater Kwajalein Atoll to inform future decision making at the command level and

in Washington. He said he plans to go before Congress within the next couple of weeks, for instance, to talk about opportunities to promote training and readiness of the nation's space and missile defense personnel, a subject coming under increasing focus by senior Army leadership.

Before he left, he expressed his gratitude for everyone involved in making the Reagan Test Site a top-notch asset in America's defense as it continues to feel out what the future has in store for its way of war.

"Thank you for what you do and the sacrifices that you make," Mann said. "[You're] doing a very, very important mission."

From Maj. Matt Sova

Republic of the Marshall Islands President Christopher Loeak greets Lt. Gen. Mann.

From Mike Sakaio

Ebeye Mayor Johnny Lemari shows Lt. Gen. Mann around the island.

## Hourglass Reports

Jeffrey Shelden, consular officer from the U.S Embassy in Majuro, spent two days at U.S. Army Garrison-Kwajalein Atoll last week. His stay served as an excellent opportunity for residents to receive on-site passport services, advice on certificates of birth abroad and other legal information and services pertaining to U.S. citizenship.

Applicants for new passports and passport renewals filled the hallway of the USAG-KA Headquarters Building and joined others seeking information on citizenship, adoption, travel and voting.

The trip was also an opportunity for the embassy to touch on other issues where the missions of the Army and the Department of State overlap, such as educational internships for Marshallese students, historic preservation issues and the environment.

Kwajalein residents wait in line to see the consular officer at the USAG-KA Headquarters Building last week.

## EMERGENCY ACTION PLAN

Do you know what to do when disaster strikes?

Are you prepared?

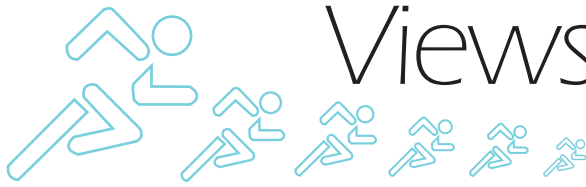

Are you familiar with the evacuation plan?

Do you know where to go for evacuation shelter?

Become familiar with Kwajalein's Disaster Plan, located in your telephone book directory. Know where to go to when being evacuated. For those evacuating to double story homes, it would be beneficial to know those neighbors.

Be Knowledgeable! Be Prepared! Be Safe!

# Views from the 2014 KRC Down Wind Dash

## Hourglass Reports

**5** 4 Kwajalein residents participated in the 34th annual Down Wind Dash. Aided by an average wind speed of 14 mph, runners finished the one-mile course along Bucholz Army Airfield in as little as five minutes. Participants as young as two and three years old took the pavement, their little bodies propelled by both the east-north-east wind and the boisterous encouragement they got from bystanders and runners at the finish line.

"Where else in the world do two- and three-year-olds run a mile?" race organizer and Kwajalein Running Club President Bob Sholar said.

Coming in first place in the men's division was 10th grader Michael Sykes, followed by David Sholar and Sam Jahnke, also 10th graders.

Jill Brown, meanwhile, took the top prize in the women's group. Jamye Loy and Mereille Bishop tied for second place.

Many runners who have participated in the event in the past noticed that their times were slower than they had been in the past.

"The winds this year were some of the lightest ever in the 34 annual runnings of the Down Wind Dash," Sholar said.

Three-year-old Chloe Wright races toward the finish line during Monday's 34th annual KRC Down Wind Dash.

# Students take prizes at science fair

## Hourglass Reports

The 2014 Kwajalein Jr./Sr. High School Science Fair brought out about two dozen budding researchers, who used the event to showcase their knowledge of a wide range of issues relating to biology, physiology, meteorology, astronomy, geology, physics and more.

Matt Gerber, one of the school's science teachers, helped organize the event and said he was more than impressed with both the turnout of the event and the professionalism of the students' projects.

"This year's science fair involved a lot of really in-depth projects," Gerber said. "I was impressed with the amount of work that each student put into their presentation and I thought we had a really great example of just how intelligent our students are on Kwaj. I was struck by the practicality of many of the projects and heard people who came for the open house talk about how much they learned from the students."

The overall purpose of the fair was to give students an opportunity to explore, on a much deeper

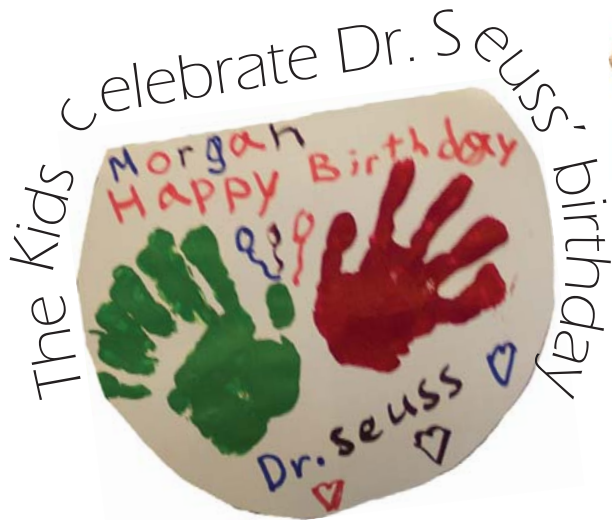

and intimate level, subjects they have learned in class. Gerber said that it was important for students to take a hands-on approach to learning and learn how to follow the scientific method as they conduct their own experiments and teach their findings to others.

Some of the young scientists walked away from the event with some serious awards.

"There were several students who won prizes in the science fair," Gerber said. "But everyone did a great job and should be proud of their efforts."
